

Noctua NF-R8 CPU/Case Fan 2-Pack

Sound-optimized blade geometry and profile: The NF-R8 is the first fan employing a novel 80mm rotor which was developed by the Austrian Institute for Heat-Transmission and Fan Technology. Thanks to the special optimisation of the blade geometry towards ultra low noise application, the NF-R8 is up to 10% quieter than current high-end fans at the same flow rate.

Self-stabilizing oil-pressure bearing (SSO bearing): The NF-R8 series are equipped with a magnetically centered, self lubricating oil-pressure bearing that provides a new level of quietness and long-term stability.

Specifications

• Fan Type:	CPU / Case Fan
• Fan Speed:	1800 RPM
• Air Flow:	31.19 CFM (53 m ³ /h)
• Bearing Type:	SSO Bearing
